Crossgates Farm Ltd

Circuitron 30's

£10.59

Cholesterol and fat deposition

The circulatory system is composed of the heart, blood and a network of blood vessels which includes the arteries, veins and capillaries. The function of the circulatory system is to provide a continuous supply of oxygen and nutrients to the body tissues, whilst carrying away carbon dioxide and other waste products for excretion. This is achieved by the heart, a powerful muscular organ.

Circuitron is beneficial for people who have one or more of the following factors which may contribute to an increase in the risk of circulatory disorders:

- Genetics
- Age
- Smoking
- Obesity
- Raised cholesterol
- Elevated homocysteine level
- Lack of exercise
- High blood sugar
